

TRIANGULAR BAGS *Directly from the*

Triangular bags are packaging containers that can be used widely for packaging products like sweets, seeds and smaller vegetables. In the course of the production bags can be made into blocks, either by heat, or with metal spikes or plastic plugs to be used on Thürlings packaging machines, which is always determined by the type of packaging (manual or mechanical packaging). The unique shape makes this packaging highly spectacular and eye-catching.
